Letter of Attestation for International R&D Project Manager

This note is to confirm that **Mr. Marius Rogobete** born at September 6, 1959 was Project Manager at our company on the Embedded Project for Bluetooth Application that was completed successfully in July 2004 (starting with January 2002), within a budget of 140000 Euros.

The project was to develop hardware and software for a very original application able to send and receive data from/to an embedded device to/from a PC via Bluetooth technique.

It has researched the behavior of Philips Bluetooth Daughter Cards (BTDCs) for different upper stack profiles implemented on embedded device and PC.

Hardware configuration

- P89C51RD2 Philips µC connected with:
 - keyboard with 15 keys
 - 4*16 digits LCD
 - Bluetooth Daughter Card (BTDC)
- PC connected with Bluetooth Daughter Card (BTDC).

Software configuration

- Upper stack for µC (research profiles behavior for HCI commands, RFCOMM and OBEX) including special additional functions, handle the information from/to keyboard and LCD.
- PC's upper stack (studying profiles: L2CAP, SDP, RFCOMM, OBEX, FTP, OPP - compliant Bluetooth Specification, Version 1.1) using client-server Microsoft software technology.

The µC upperstack reads a string from the 15 keys keyboard (0-9, +, *, Table, Transmission, Cancel). It is transmitted to the master Bluetooth unit (PC Bluetooth connection).

On the PC, the received string is analyzed, and the resulted information is extracted from database that is sent back to embedded device for operator validation. Then, the new validated data is sent again to PC for database update.

Duties included coordination of a team of two electronic engineers, one physicist, two software developers and a fault analysis specialist and project budget management.

I declare that the above statements are true and accurate to the best of my knowledge, information and belief.

Research and Development Project Attestation

Since May 2007 Mr. Marius Rogobete was the project manager of the research and development project with title “Integration of the Pattern Match Engine in SNORT application” with a budget of 120 000 euros. The project was finished successfully in January 2009.

The main goal of the project was to research the “Pattern Match Engine 2.0” behavior when it is working on the P2040 QorIQ Integrated Processor.

In this reason, the research has started with the design, develop and test applications using 8572 Freescale processor. Therefore, the Pattern Match Engine chip was integrated in SNORT open source application and then, using the system 8572 processor , a benchmarking configuration was developed, using specific IXIA devices (e.g. SmartBit).

Finally, this project was able to give solutions for design integration of Pattern Match Engine into P2040/P2041 platform, proving that one chip solution is the best solutions for snorting networking processes.
